Adani Power Financial Analysis Dashboard (Power BI)

PROJECT DOCUMENTATION

BY

NAME – AYUSHMAN PATTANAIK

ROLL NO – 2305850

PROGRAM – BTECH

BRANCH – CSE

Problem Statement

Energy companies like Adani Power generate large financial datasets including revenue, expenses, and profit metrics. However, raw data makes it difficult to quickly analyze performance trends, profitability, and cost structure.

The problem is to convert complex financial data into a simple, interactive dashboard for better decision-making.

Solution & Features

A Power BI dashboard was created to visualize financial performance of Adani Power.

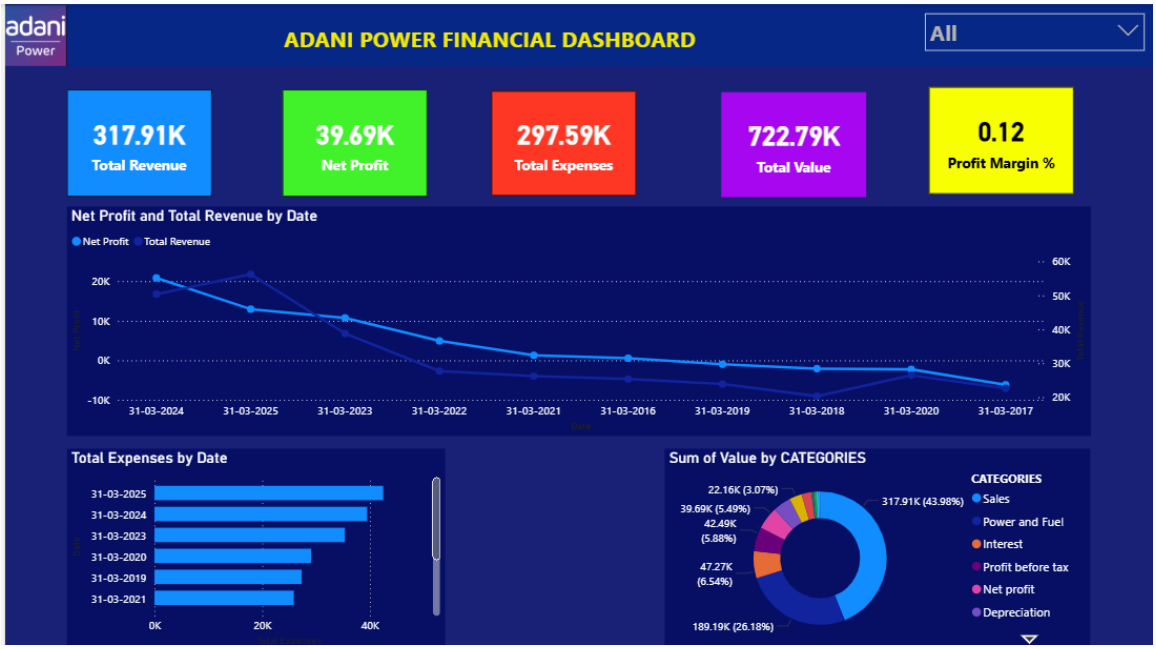
Key Features:

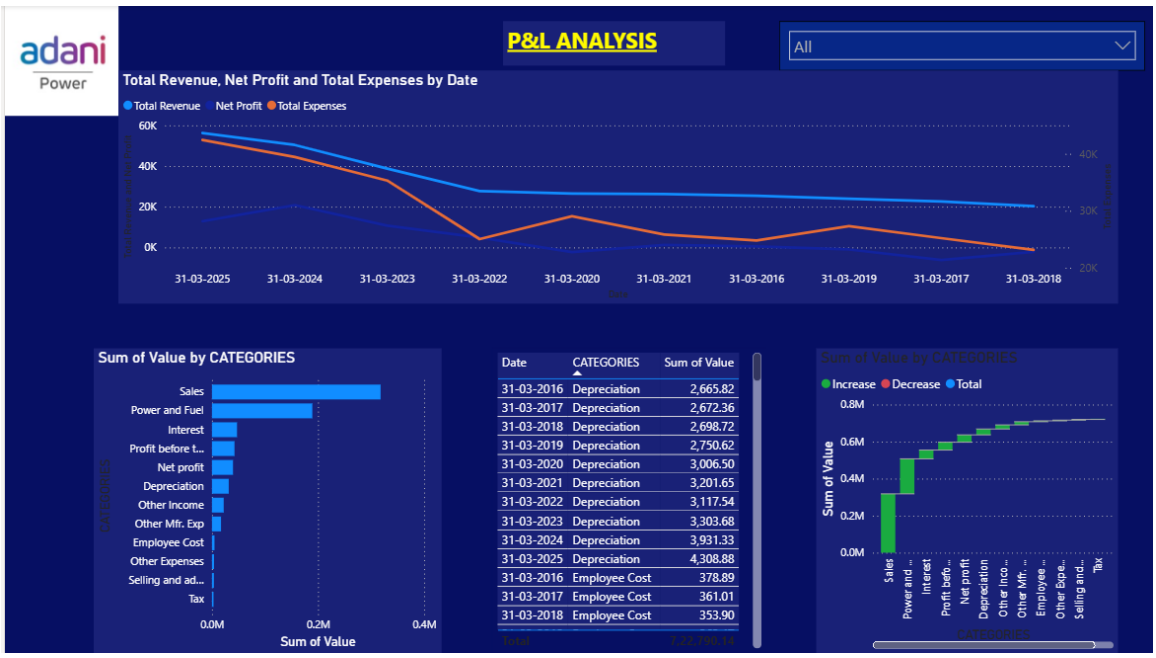
- Revenue vs Expense trend analysis
- Profit calculation and breakdown
- Year-wise performance tracking
- Interactive filters for deeper insights

Tech Stack Used

- Power BI (Data Visualization)
- Excel (Data Source)
- DAX (Calculations & Measures)

Screenshots





Date	CATEGORIES	Sum of Value
31-03-2016	Depreciation	2,665.82
31-03-2017	Depreciation	2,672.36
31-03-2018	Depreciation	2,698.72
31-03-2019	Depreciation	2,750.62
31-03-2020	Depreciation	3,006.50
31-03-2021	Depreciation	3,201.65
31-03-2022	Depreciation	3,117.54
31-03-2023	Depreciation	3,303.68
31-03-2024	Depreciation	3,931.33
31-03-2025	Depreciation	4,308.88
31-03-2016	Employee Cost	378.89
31-03-2017	Employee Cost	361.01
31-03-2018	Employee Cost	353.90

Unique Points

- Clean and interactive dashboard design
- Easy interpretation of financial data
- Beginner-friendly structure

Future Improvements

- Add forecasting model for future revenue
- Integrate real-time stock/market data
- Include AI-based insights for decision making
